

Solutions

As a leading power management solutions company, PACE ensures that its products are energy efficient and have environmental sustainability. Critical power infrastructure and solar solutions, uninterruptible power supplies, telecom power solutions, and many more are offered by PACE for various industries. A fully automatic telecom BTS power solution called the Integrated Power Management System (IPMS) replaces the use of conventional disintegrated power solutions in telecom network. Solutions of access management from PACE, through GPRS/GXM with real time data tracks the performance of operational services. PACE also offers advanced range of power solutions for infra for all kinds of applications. Use of high quality components and standard application procedures helps PACE to deliver world class solutions to all its customers worldwide. Remote monitoring management solution using cutting-edge GPRS/GSM technology coupled with expert service capabilities are a specialized trait at PACE.

The team of expert electromechanical engineers, who are specialized in the fields of designing, supply, installation and commissioning of preventive and maintenance solutions, leverage local and regional service resources for high end solutions. The solutions we offer are innovative and have an edge over the competition, as we update our systems with new technology consistently. Our power and hybrid solutions are applicable to all kinds of network equipment, cellular sites and transmission applications.
