

## Energy Metering Solutions

We design, develop products and provide solution for Energy Metering application. Our energy meter series mainly focuses on revenue metering for single-phase and three-phase electrical circuits. Utilities can deploy these products for measurement of energy consumption, TOD consumption, MD indication and also get load profiles and event logging with various communication options.

Latest Solution from PACE family is the Advance Metering Infrastructure (AMI), which facilitates tracking power consumption in industries and utilities. AMI/AMR (Automatic Meter Reading) is a real time monitoring system that will revolutionize the way power is monitored, utilized and controlled. It reduces meter reading cost and increases revenue. The above solution is appropriate for both domestic and commercial run.
