

Distribution Lines

The Distribution segment of pacepower undertakes Turnkey Projects for the Distribution (Discoms) Companies. The scope of Distribution Systems work broadly involves SITC works of 33 kV and 11 kV Substations, Distribution Lines, Distribution Transformers, Metering, covered under various schemes such as Rural and Urban Electrification, RGGVY, APDRP and BPL. We also undertake underground power cables projects.

We are involved in more than just the design and planning elements of "Power Grid". We are nextplorers, we also cater on-site inspection, repair and maintenance, avalanche protection design, environmental impact assessments and studies, quality control and feasibility studies. We firmly believe in collaborative growth which is our core strength that helps us move towards stratosphere with a swift PACE.
