

Green Energy

Green energy is generated from alternative energy sources and cannot be depleted. Dependence of fossil fuels can be limited considerably when we use products fuelled by green energy. PACE offers innovative products that are fuelled by green energy, especially solar energy. Solar energy is generated by using solar panels, which convert the sun radiation into electricity. This energy can be useful for powering industries, homes, vehicles and many other purposes. PACE has developed technologically advanced products that use solar energy efficiently and provide a lot of benefits to the customers in various industries. Some of the green energy products from PACE are Solar Inverters, MPPT chargers and Solar PCU.
